

● LEGACY CODE

What to migrate first?

IBM Bob audits the system and proves it by **file and line**.

— IBM Bob 2.0 Hackathon • 2026

THE PROBLEM

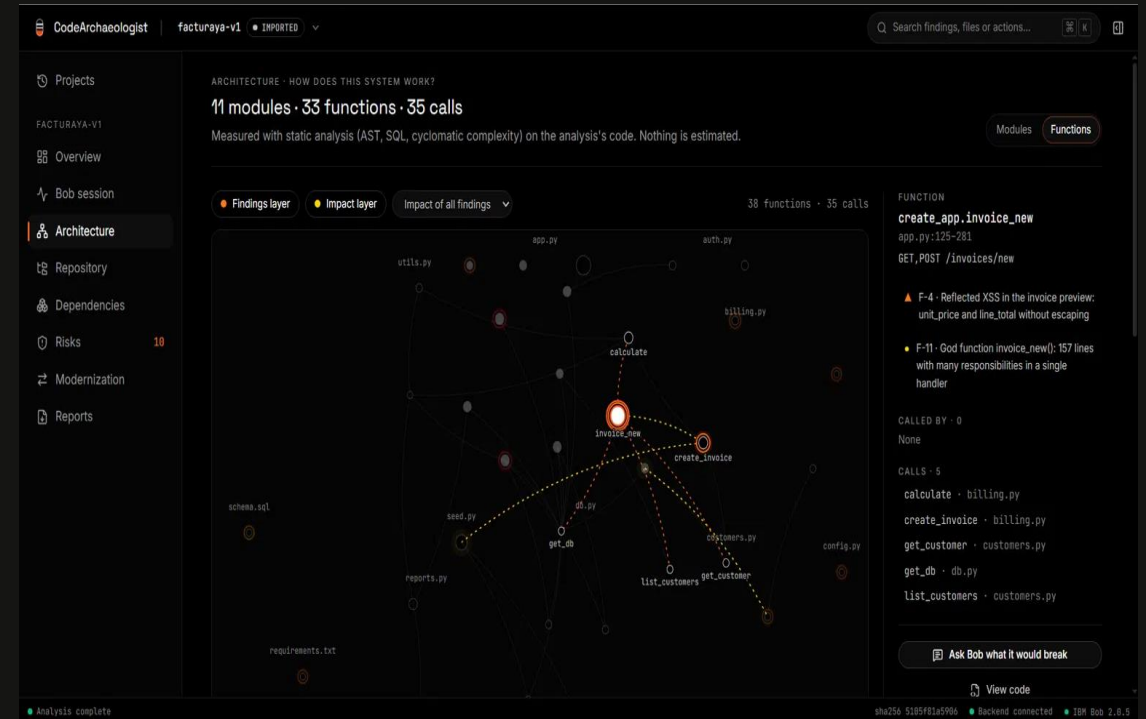

Every company has a system
nobody dares to touch.

No tests

No original author

Business rules buried in the code

The board must approve the budget **without being able to read the code.**

THE SOLUTION

Three deliverables from one audit

01

Verifiable dossier

Every finding cites a file and its lines.
lines.

02

Migration recommendation recommendation

Computed by code, not by the AI.

03

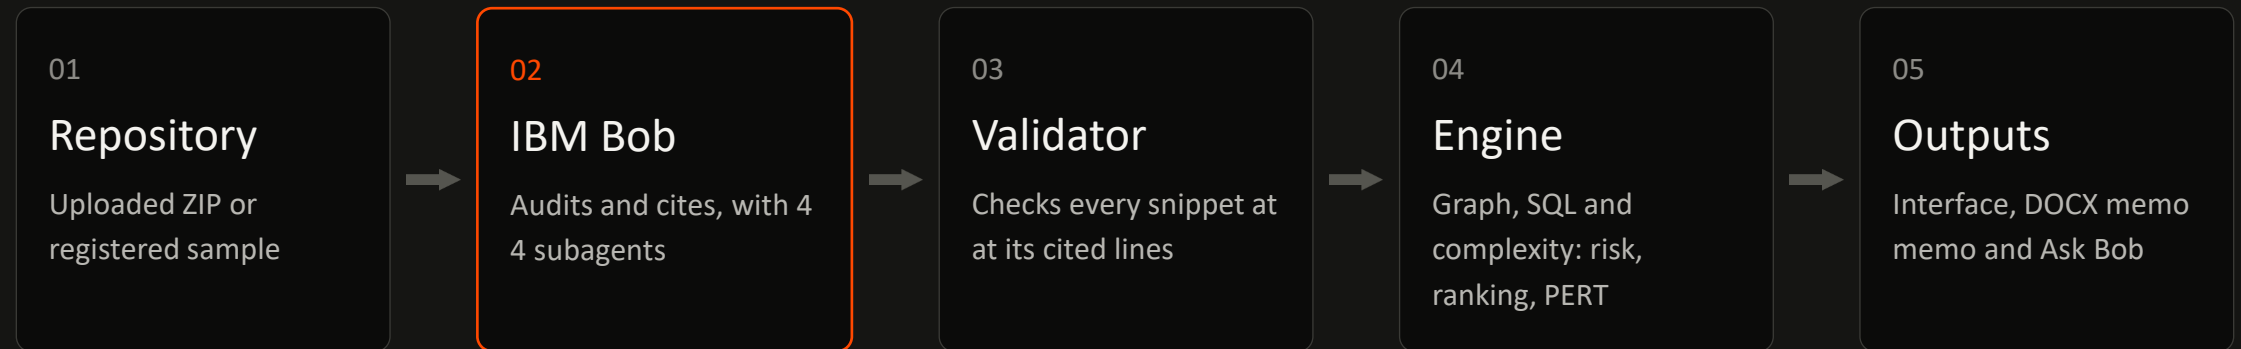

Board memo

DOCX with risks, effort and traceability.
traceability.

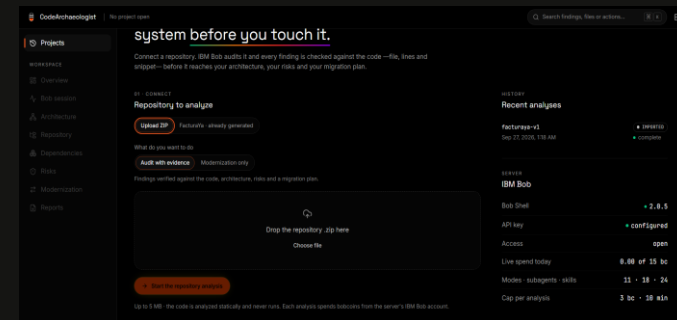

✓ Plus a tested first Strangler Fig cut on the controlled sample.

HOW IT WORKS

The AI proposes. Code decides.

Bob reads and cites. Python verifies and computes every number.

Our own Bob modes, subagents and skills

11

custom modes

18

subagents

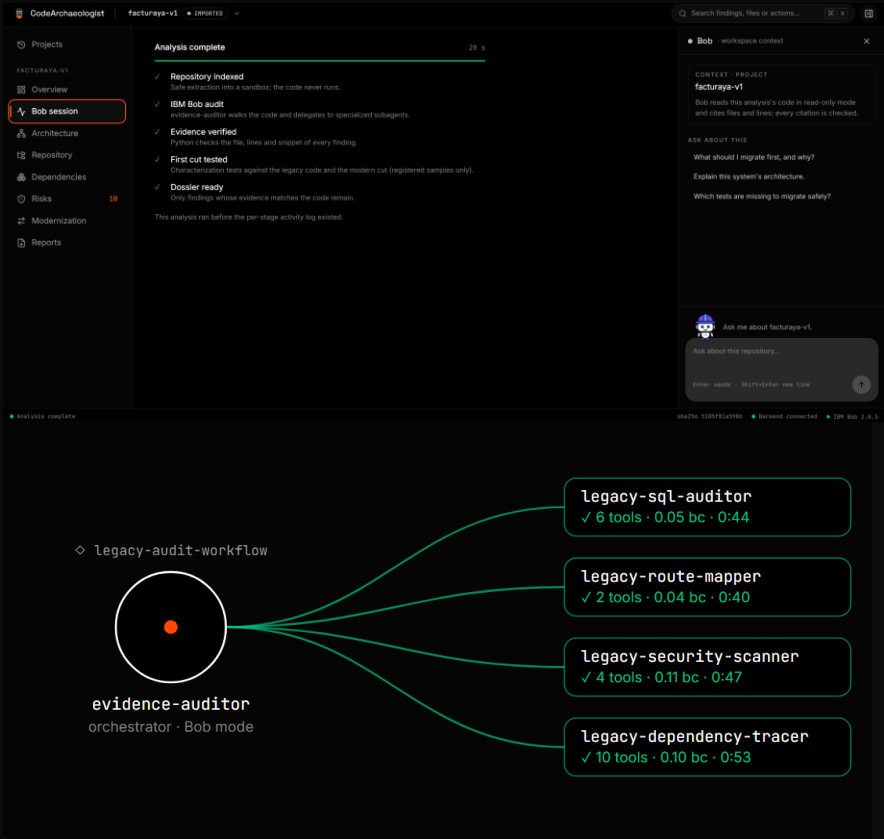

24

skills

5

modes live in the product

Live activity feed · spend caps per run · session recovery
recovery

EVIDENCE, NOT OPINION

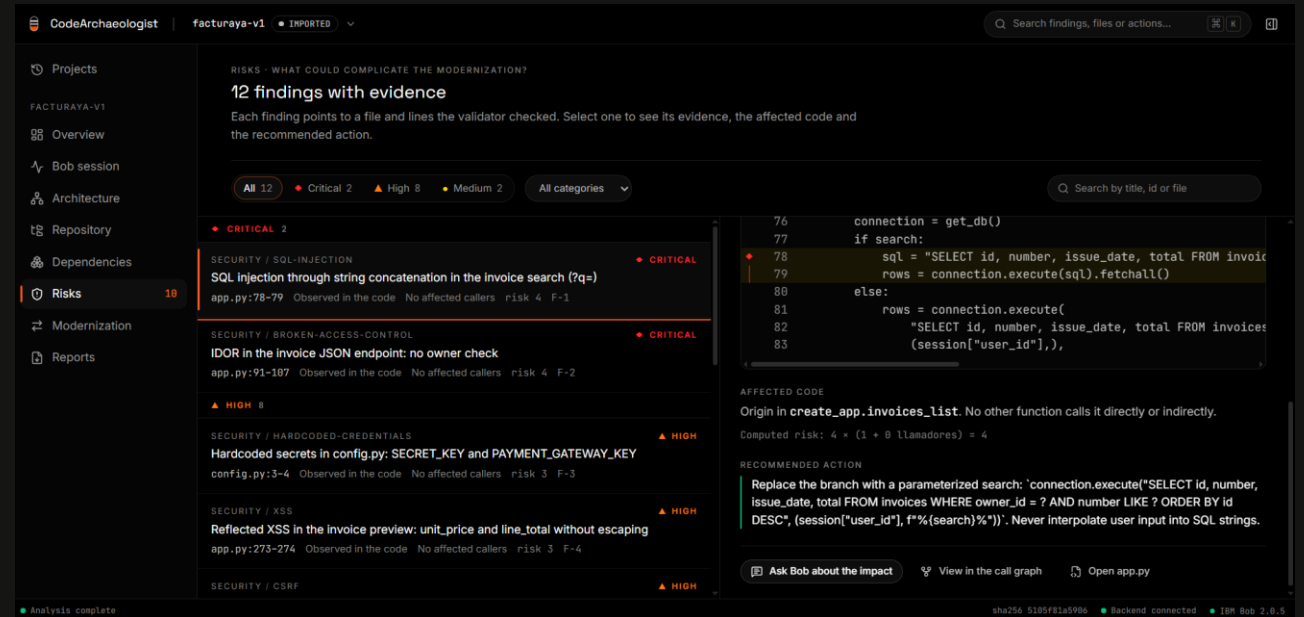

Every finding opens at the cited code

12

validated findings

14/14

citations verified

Snippet not at the cited lines? The finding is rejected.
rejected.

WHAT TO MIGRATE FIRST

A ranking computed by code

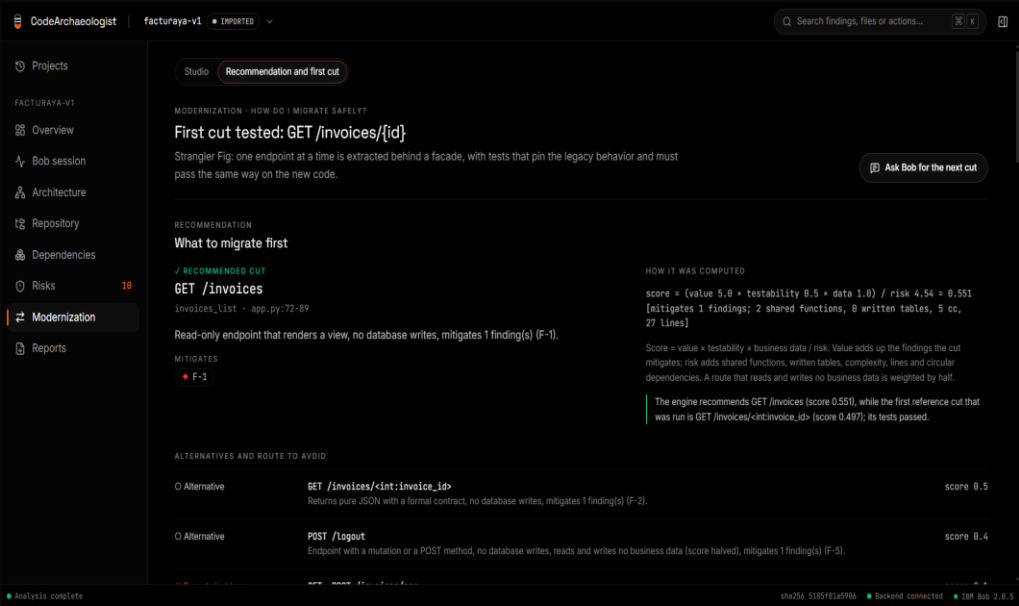

$$\text{value} \times \text{testability} \times \text{data} \div \text{risk}$$

START HERE

GET /invoices

NOT FIRST

/invoices/new

3 waves with PERT effort · reference cut passes 6/6 tests

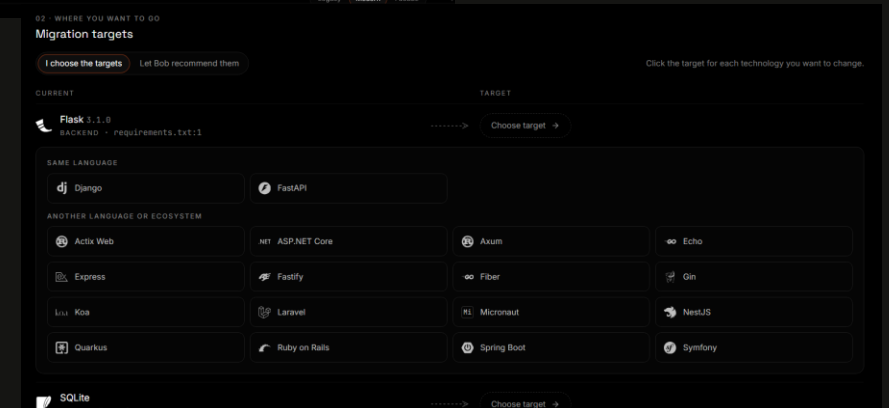

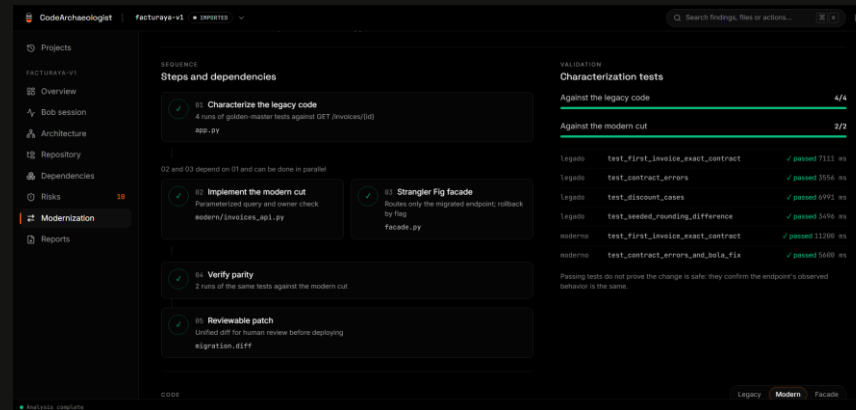

From audit to a step-by-step plan

01 **Measure** the stack

02 **Choose** the targets

03 **Plan** with Bob

04 **Apply** on a copy

Any stack. Generated code is syntax-checked, never
never executed.

WHO IT IS FOR

For people who must decide before they can read the code

FOR

CTOs

Software architects

Modernization consultancies

Boards of directors

WHY US

The AI proposes, **code decides**

Honest labels: **live** or **imported**

Secure by design: **uploaded code never runs**
